# maxbaffle wall relief

**Maxbaffle is the title of our three-dimensional wall installations. Using the slicing technique, we depict simple shapes and figures in oversized dimensions, giving every wall an acoustic absorber that is something to behold. All baffles are cut out individually and assembled using our specially developed plug-in system. The layered construction results in efficient absorption of disturbing background noise, making any room sound nicer and more pleasant.**

**A choice of 24 colours makes it possible to adapt each piece to individual colour tastes.**

**We offer a range of ready-made maxbaffles or design unique and individual pieces according to the wishes of our customers.**

**All works are designed by Piet van Harskamp.**

### sound absorption at 200mm gap

# maxcurtain & maxflex acoustic curtain & sound curtain

Raise the curtain on the maxcurtain collection. These curtains reduce reverberation and thus improve the sound in the room. The maxflex model additionally blocks sound from one side to the other. Close the curtain for pleasant room acoustics.
